

PEDRO VIDAL

Full-Stack PHP Developer | WordPress | Laravel | 20+ Years of Experience

Porto Alegre, RS • +55 55 9 9667 4254 • pedrorvidal@gmail.com • pedrorvidal.github.io • linkedin.com/in/pedrorvidal

PROFESSIONAL SUMMARY

Full-Stack Developer with 20+ years of experience in PHP, WordPress, and Laravel, with strong hands-on work in requirements gathering and data modeling for complex integrations. Proven track record managing multiple simultaneous projects for international brands such as Merz Aesthetics, Torrent Pharma, and Medtronic, with a consistent history of diagnosing and fixing performance/SEO issues, responding to security incidents, and standardizing maintenance processes at scale.

PROFESSIONAL EXPERIENCE

WordPress / Full-Stack Developer — F2F Digital

March 2023 – August 2026 • Digital agency

Full-stack developer acting as development and maintenance lead across multiple simultaneous projects, including sole technical point of reference for the entire Merz Pharma network (Ultherapy, Confidence to Be Me, and Merz Aesthetics) — multi-country sites in Argentina, Brazil, Colombia, and Mexico, with integrations to Salesforce, Salesforce Marketing Cloud, and Crisalix — in addition to Medtronic, GLP, Alares, DiversiHub, Abrafati, Tinta de Qualidade, and Torrent Pharma.

KEY RESULTS

- Led the migration and the performance/SEO diagnosis and fix for GLP's corporate site (~900 pages, investor-facing audience): identified the root cause of ~390 broken links, cut mobile render-blocking time by 70–75%, and removed ~900 orphan pages, with a documented audit playbook for reuse.
- Responded to a security incident (possible malware) across a 5-site Ultherapy network, with remediation and a documented guide, followed by a standardized — AI-assisted — routine for updating WordPress core and dependencies via Composer across 10 repositories (2 pharmaceutical brands × 5 Latin American markets), cutting the update cycle time from 1 week to 1 day.
- Responsible for building Alares' first e-commerce store, integrated with RD Station to capture every purchase attempt as a lead — including sales not completed due to lack of signal coverage in the region, converted into future sales opportunities — expanding the client's digital sales channel.
- Led the kickoff of the rebuild of the Tinta de Qualidade and Abrafati corporate sites, replacing the heavy Cornerstone page builder with custom blocks and defining the new technical foundation in WordPress.
- Implemented 5 continuous integrations between multi-country landing pages and RD Station for Medtronic, raising lead capture to 100% error-free — mapping and normalizing divergent fields across each country's forms (e.g., "estado" in Brazil vs. "provincia" in Argentina) into a single CRM record, including handling fields missing from specific forms.
- Fixed conversion-event failures that were distorting campaign data across a 5-site Merz Aesthetics network, restoring the reliability of the analytics the marketing team relied on for media decisions (Google Tag Manager/DataLayer).
- Restored critical geographic search functionality on the Confidence to Be Me platform, replacing a fragile in-house integration with the Google Places API + ViaCEP — eliminating a friction point that was preventing patients from finding clinics.
- Sped up delivery across multi-site WordPress/Bedrock codebases with AI-assisted development workflows (Claude Code) — documented technical planning, standardized multi-step execution, and diagnostic runbooks for recurring infrastructure issues, verified via WP-CLI and MySQL.
- Expanded the marketing team's editorial flexibility with custom Gutenberg blocks (React + PHP), overcoming the limitations of ACF-based blocks and page builders.

- Maintained and expanded Confidence to Be Me's network of accredited clinics (find-a-doctor) into the DPLATAM market, on a full-stack Laravel + Docker and WordPress codebase.
- Built the ChegoLá Consórcios corporate site on a lean stack (100% native Gutenberg blocks, no page builder), including custom CSS and a PHP integration with Salesforce.
- Built a module in Torrent Pharma's Laravel admin panel enabling multiple media file (PDF) uploads per pharmaceutical product, expanding the documentation available for each medication.

PREVIOUS EXPERIENCE

WordPress Developer — DEXA *(Jan 2022 – Mar 2023)*

Built WordPress sites and portals from Figma layouts, with automated deployments via Jenkins/GitHub Actions and custom ACF Pro plugins/blocks. Team contributor on Coty's international site; individually led the international Perch project, with direct client contact. Responsible for the PEC data-management module for MinervaFoods — replacing Excel-based tracking with an in-house management system — plus team member on the rebuild of MinervaFoods' corporate portal, migrating from the Divi theme (visual builder) to a custom theme with custom blocks.

Full-Stack Developer — PluralWeb *(Nov 2016 – Aug 2017)*

Built and maintained websites in WordPress, PHP, and CodeIgniter, including legacy AngularJS systems.

Frontend Developer — N49 *(Jun 2016 – Oct 2016)*

Frontend development for internal systems and N49's proprietary e-commerce tool.

PHP Developer — Join Tecnologia *(Sep 2015 – May 2016)*

Built systems for the federal government using PHP OO, Symfony, Silex, and Doctrine, on MySQL, PostgreSQL, and SQL Server — including a nationwide occupational health reporting system for SESI, integrated with a legacy Java/SQL Server system.

Full-Stack Developer — Rage Comunicação *(Oct 2011 – Aug 2015)*

Built websites, e-commerce stores (WooCommerce), and systems in WordPress and CodeIgniter. Sole developer responsible for the complete migration of Trajano Silva's high-volume financial auction system from ASP/SQL Server to CodeIgniter/MySQL, with no data loss, no loss of transaction or user history, and no business downtime.

Full-Stack PHP Developer — Freelancer *(Nov 2005 – Sep 2011)*

Built websites and portals with WordPress, CodeIgniter, and MySQL, including database modeling and Linux/Apache environment setup.

EDUCATION & LANGUAGE

Bachelor's Degree in Computer Science — URI, Frederico Westphalen Campus (2005)

Fluent English

CORE SKILLS

Languages & Frameworks: PHP, WordPress, Laravel, CodeIgniter, JavaScript, HTML/CSS

Data & Infrastructure: MySQL, Docker, Git/GitHub/GitLab/Bitbucket

CI/CD: GitHub Actions, Bitbucket Pipelines, Jenkins

AI & Automation: Claude Code, MCP/Playwright, workflow orchestration, and QA automation

Methodologies: Scrum, Kanban
